ICT SPECIALTY PRODUCTS CORP.

ICT Specialty Products Corp. (ICTSPC) works directly with manufacturers and private-label brands as a distributor of specialized construction materials, paints, waterproofing systems, highway products, industrial coatings, and maintenance solutions.

With more than 20 years of experience serving Latin America and the Caribbean, ICTSPC personnel possess extensive logistics expertise, allowing us to deliver products efficiently anywhere in the world.

Our Traffic Division offers a complete line of traffic and pavement marking products for highways, roads, parking lots, and airports. All products meet required specifications and performance standards.

Thermoplastic Paint

Thermoplastic paint is a road marking material composed of solid synthetic resins that melt when heated and harden upon cooling. It is widely used for traffic lines, symbols, and safety markings due to its superior durability and high visibility.

- Packaging: 2,000-lb pallets.
- Complies with AASHTO M249 (USA/International.)

Traffic Paint

Traffic paint is a specially formulated coating used to mark roads, highways, parking lots, airports, and industrial areas. It provides high visibility, fast drying time, and strong resistance to traffic wear and weather conditions.

- Packaging: 5-gallon buckets.
- Complies with: TT-P-1952 and AASHTO M348 (USA/International.)

Glass Beads

Glass beads are small spherical particles made of clear glass, primarily used in road and traffic markings to provide nighttime reflectivity. When vehicle headlights strike the beads, light is reflected back toward the driver, a process known as retroreflection.

- Packaging: 2,000-lb pallets.
- Complies with: AASHTO M247 and TT-B-1325 (USA/International.)

Reflective Pavement Markers

Reflective Pavement Markers (RPMs), commonly known as road studs or “cat’s eyes,” are raised devices installed on road surfaces to enhance visibility during nighttime and wet-weather conditions. They reflect vehicle headlights back toward drivers using built-in retroreflectors.

- Packaging: Boxes of 100 units.
- Complies with: ASTM D4280 (USA/ International.)

Bituminous Adhesive

Bituminous adhesive (also known as bitumen or asphalt adhesive) is a hot-applied bonding material used to secure reflective pavement markers (RPMs) to asphalt road surfaces.

- Packaging: 55-lb boxes.
- Complies with: DOT and AASHTO M237 (USA/International.)
